

## CE-Marking: proposal for new regulation for **Construction Products**

The European commission has offered a proposal for a new regulation for Construction Products. The new regulation will be replacing the current regulation 89/106/EEG. The goal of the proposal is to remove the remaining restrictions of the current regulation. This will improve the free movement of goods, i.e. construction products, within the European Union. The proposal contains beyond others the introduction of a 'common technical language' and a simplification of the procedure regarding CE-marking.
