De Block weigert te besparen op kankertherapie

05 juli 2018 06:50

🔖 f in 🐦 ✉

Maggie De Block verwacht een geste van haar collega's in de federale regering om het gat in haar begroting te vullen. ©Dieter Telemans

Het succes van nieuwe kankerbehandelingen slaat een gat van bijna 300 miljoen euro in de begroting. Minister Maggie De Block weigert daarop te besparen.

In 2019 zal de ziekteverzekering zo'n half miljard meer uitgeven dan aanvankelijk voorzien. Dat is voor een groot stuk te wijten aan het onderschatte succes van doeltreffende kankerbehandelingen.

www.tijd.be, 5 juli 2018

Hervormen voor een kwaliteitsvolle, toegankelijke en duurzame gezondheidszorg

- Hervorming ziekenhuissector
- Toekomstpact voor de patiënt met de farmasector
- Geïntegreerde zorg
- Kwaliteitswet
- *En nog heel veel meer*

Paradigmashift: naar een geïntegreerd zorgsysteem

Huidige paradigma

- Gefragmenteerd aanbod
- Reactieve, acute zorg
- Monodisciplinair zorgmodel
- Hiërarchie

Waar we naartoe moeten

- Geïntegreerd aanbod
- Proactieve, geplande zorg
- Interdisciplinair zorgmodel
- Partnerschap

Integreo: twaalf proefprojecten

Hervormen voor een kwaliteitsvolle, toegankelijke en duurzame gezondheidszorg

- Hervorming ziekenhuissector
- Toekomstpact voor de patiënt met de farmasector
- Geïntegreerde zorg
- Kwaliteitswet
- *En nog heel veel meer*

Kwaliteitswet: extra garanties voor de patiënt

“De patiënt moet altijd en overal op zorg van de hoogst mogelijke kwaliteit kunnen rekenen, ongeacht wie die zorg toedient of waar dat gebeurt”

Conclusie

After a century of striving, after a year of debate,
after a historic vote, health care reform is no
longer an unmet promise. It is the law of the land.

(Barack Obama)

How do You, how does a Patient encounter the Quality of Healthcare ?

In Germany there is an intense discussion regarding the quality of the single procedure, the quality of individual providers.

We plan to pay for the performance of hospitals and of individual physicians.

Porter/Teisberg argued in 2006 instead that competition should be directed towards value. They regard medical conditions as the arena of competition.

Their goal: Value-based healthcare

Enthoven/Tollen answered
already in 2005 on P/T:
Only Integrated Delivery Systems
with financial overall
responsibility for full health care
service delivery are best
incentivized to produce quality &
efficiency.

Competition In Health Care: It Takes Systems To Pursue Quality And Efficiency

If systems are the best locus of accountability for health care quality and efficiency, then competition should be designed to encourage evolution toward “systemness.”

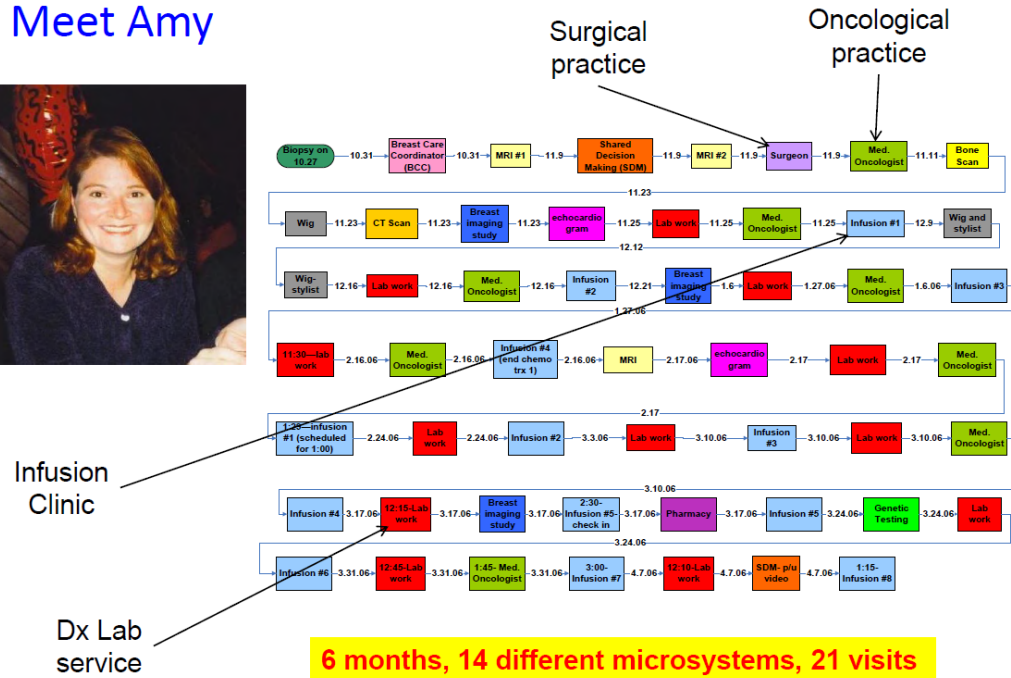

by **Alain C. Enthoven and Laura A. Tollen**

Goal: Value-based &
integrated accountable care
systems

Healthcare is heavily fragmented

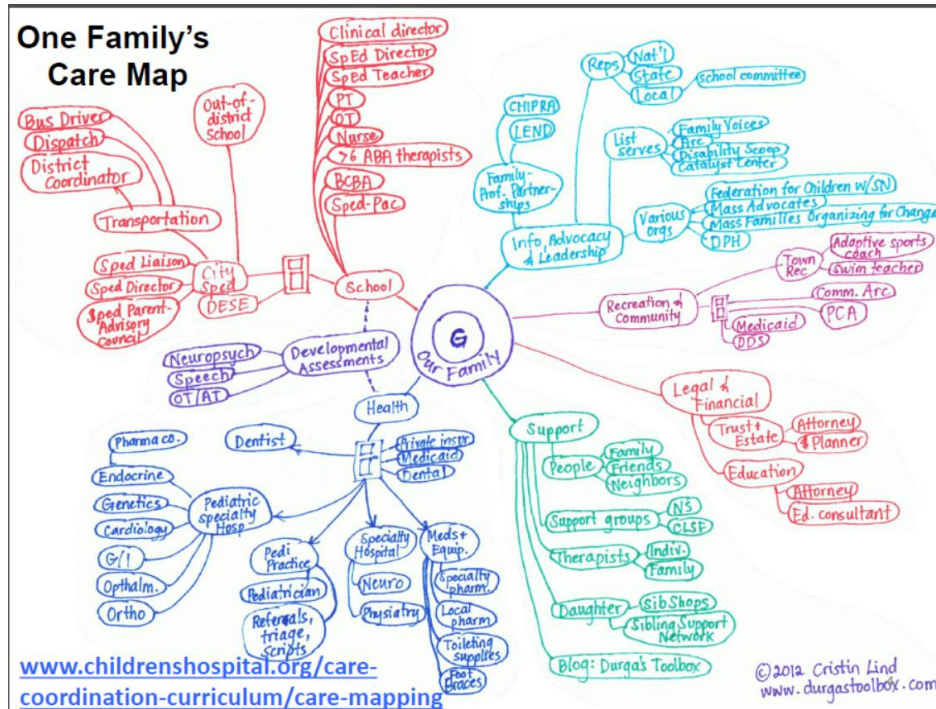

Each microsystem might be well organized, but the full patient pathway likely isn't!

Meet Amy

Professor Eugene C. Nelson, DSc, MPH, The Dartmouth Institute, USA

And the patient's pathway includes even more than healthcare!

Richard Antonelli, MD, MS Medical Director of Integrated Care Boston Children's Hospital / Harvard Medical School Boston, USA vom 26 October 2016 in Wellington, Neuseeland

How do You, how does a Patient encounter the Quality of Healthcare ?

For patients in complex situations, for the elderly, the quality of the **full patient pathway** including all sectors of care is most important!

The good news : We'll make it*!

The health system can be organized in a way which is more efficient and which „produces health“.

* Reference to German chancellor Dr. Angela Merkel

Integrated Care Gesundes Kinzigtal

2005 Founding of the regional management company "Gesundes Kinzigtal GmbH" by OptiMedis AG (1/3) and medical network MQNK e.V. (2/3).

Contracting health funds: AOK Baden-Württemberg (since 2005), SVLFG (since 2006), Techniker Krankenkasse (since 2016, but only for special services)

Population: Approx. 33,000 insured members of the AOK and SVLFG in Kinzigtal, of which approx.10,000 enrolled as IV participants

Cooperating partners: approx. 300 (GPs and specialist doctors, hospitals, home care services, other medical professions, pharmacists, sports and community associations, etc.)

From Jan 2018 onwards, the ambulatory physicians are paid directly by Gesundes Kinzigtal.

One Example: Gesundes Kinzigtal: a geographically defined long term Shared Savings contract

- **Start:** 2006 – 10 year contract, now indefinite contract
- **Shared Savings contract:** Accountability for medical and economical results of a geographically-defined population of 33,000 insurees (two statutory health insurers AOK & LKK)
- **Aim:** Set incentives to focus on population health, vulnerable patients and include all providers – good or bad performers – avoid risk-selection.

A new value-based business model: Shared Savings Contract

In “Shared Savings Contracts” we generate an economical benefit for purchasers for a geographically defined population through wise investments, prevention and optimized care.

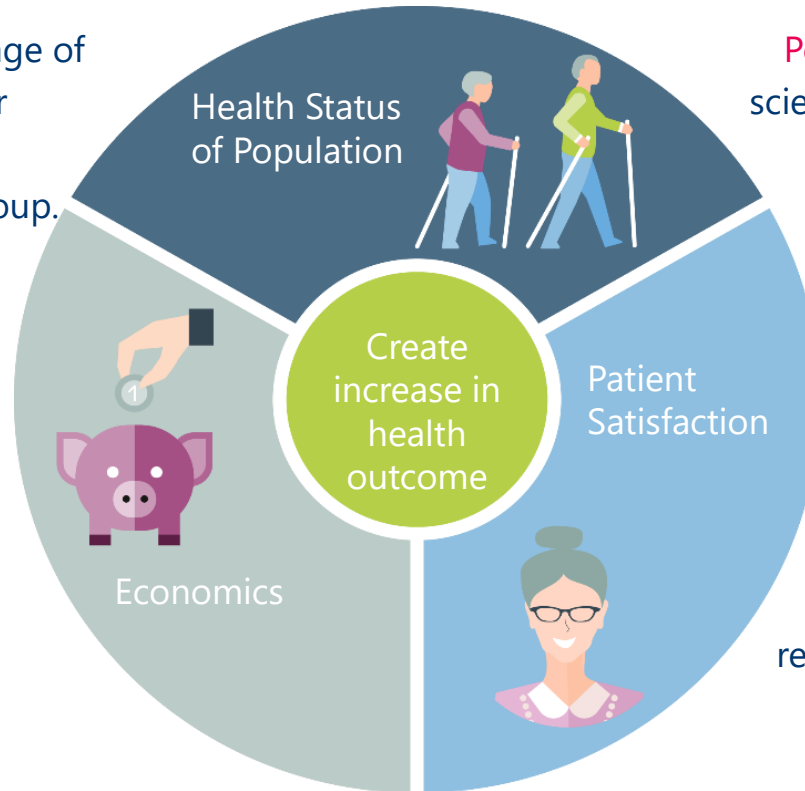

This economical benefit is shared between purchaser and us and is our motor + refines our investment → long term contract needed

In Gesundes Kinzigtal we make it – 12 years so far, and still going strong

GK members live an average of **1.2 years** longer than their individual life expectancy, compared to a control group.

From 2007 to 2015 totaling **€ 35.5 Mill.** Increase in surplus gross earnings (**net € 10.9 mill.**) for the participating health insurance funds

Positive confirmation by ext. scientific evaluation 2004-2011 of the effects on the – insureds in Kinzigtal (2012 – 2016 evaluation in progress INTEGRAL) OptiMedis-eobic UK Limited

98,9% of GK members who, mutually with their physician, agreed to define binding goals, would recommend GK membership.

Triple Aim results: improved health

Original Article

Evaluating the Impact of an Accountable Care Organization on Population Health: the Quasi-Experimental Design of the German *Gesundes Kinzigtal*

Alexander Pimperl, Dr. phil.,¹ Timo Schulte, MBA, Dipl.-Kfm.,^{2,3} Axel Mühlbacher, Dr. rer. oec., Dipl.-Kfm.,⁴ Magdalena Rosenmöller, PhD, MD, MBA,⁵ Reinhard Busse, Dr. med, MPH, FFFPH,⁶ Oliver Groene, PhD, MSc, MA,^{3,7} Hector P. Rodriguez, PhD, MPH,¹ and Helmut Hildebrandt, Dr. h.c.^{3,8}

Abstract

A central goal of accountable care organizations (ACOs) is to improve the health of their accountable population. No evidence currently links ACO development to improved population health. A major challenge to establishing the evidence base for the impact of ACOs on population health is the absence of a theoretically grounded, robust, operationally feasible, and meaningful research design. The authors present an evaluation study design, provide an empirical example, and discuss considerations for generating the evidence base for ACO implementation. A quasi-experimental study design using propensity score matching in combination with small-scale exact matching is implemented. Outcome indicators based on claims data were constructed and analyzed. Population health is measured by using a range of mortality indicators: mortality ratio, age at time of death, years of potential life lost/gained, and survival time. The application is assessed using longitudinal data from *Gesundes Kinzigtal*, one of the leading population-based ACOs in Germany. The proposed matching approach resulted in a balanced control of observable differences between the intervention (ACO) and control groups. The mortality indicators used indicate positive results. For example, 635.6 fewer years of potential life lost (2005.8 vs. 2641.4; *t*-test: sig. $P < 0.05^*$) in the ACO intervention group ($n = 5411$) attributable to the ACO, also after controlling for a potential (indirect) immortal time bias by excluding the first half year after enrollment from the outcome measurement. This empirical example of the impact of a German ACO on population health can be extended to the evaluation of ACOs and other integrated delivery models of care.

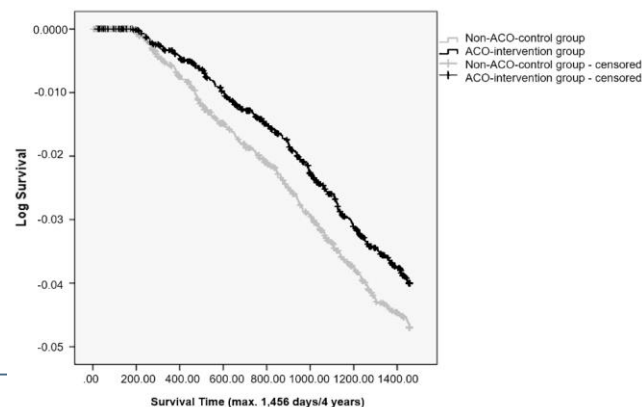

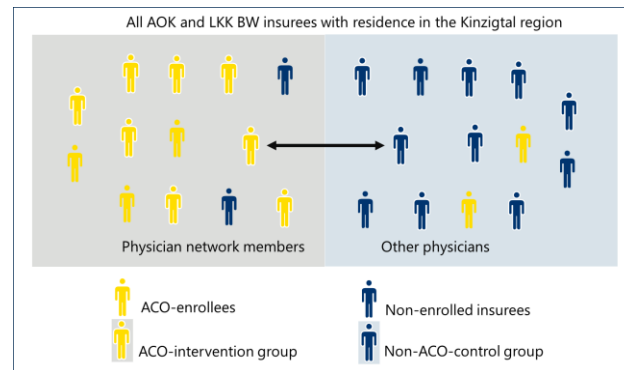

Background

HEALTH CARE SYSTEMS are aiming to achieve the Triple Aim: improving population health, patient experience, and cost efficiency. The architects of the Triple Aim¹ highlight that it is achieved by an integrator, who organizes a close collaboration between all actors, such as care providers, professionals, or community institutions. An accountable care organization (ACO) can play a central facilitating role in

moving providers and systems toward the Triple Aim. The Centers for Medicare & Medicaid Services defines ACOs as "[...] groups of doctors, hospitals, and other health care providers, who come together voluntarily to give coordinated high-quality care to the Medicare patients they serve [...]" When an ACO succeeds in both delivering high-quality care and spending health care dollars more wisely, it will share in the savings it achieves for the Medicare program.^{2,2} Integrated accountable care initiatives have been introduced in

1,5 years longer survival for GK-enrollees, without higher need of care (vs. a control group, Exact-matching +propensity score matching)

45% less fractures after program participation „Strong Muscles – Solid Bones“ (n= 438) for patients with osteoporosis

... and this relative cost reduction is not marking the end in a developed stage of competition between multiple health system companies

In the developed stage, we are assuming a saving potential that is up to four times higher than what we have achieved so far in the pilot GK, that is, up to 20% gross savings potential / 4% net for the funds

Transfer to the whole of Germany would mean:

- A relative reduction of the contribution rate by approx. 0.7 percentage points
- A relative reduction in the investment requirements in the hospital sector for the Federal Government / Federal States (Länder)
- An orientation of the service providers to the maximization of health benefits
- A massive increase in incentive for Public Health efforts

Additional Contribution Margin of AOK and LKK 2015 for their whole Kinzigtal population: 4,7 Million €

Der Beitragssatz zur GKV bis 2050
in Prozent vom beitragspflichtigen Einkommen

Quelle: Beske (2007); Beske (2010); Wille (2007) in Beske (2010); WIP (2008)

Direct and indirect target population

- The intervention is **directly** related to the approximately 10,000 enrolled integrated care participants. These are almost 1/3 of the total population of AOK Ba-Wü and SVLFG (33,000 in the Kinzigtal region). *
- **Indirectly**, all insureds of the AOK Ba-Wü and SVLFG - this is a total of 33,000 insureds in the Kinzigtal region (0-99 years) - benefit from doctors' training, health promotion, prevention and BGM interventions.
- The participation of the insured is free of charge, voluntary and only to insureds with their registered residence in the Kinzigtal (according to defined postal codes).

Direct interventions

- Target Agreements + Risk Screening
- addl. care provision programs, comparable to DMPs
- EPR
- Personalized advice
- Case Management
- Functional Training / Rehab-Sport
- Relaxation/Balancing
- Benchmarking + Feedback-Reports by means of GKV-standard data to physicians
- Campaigns to reduce / critically evaluate prescription of antibiotics
- Self-management-trainings
- Trainings, classes
- Healthy Company network

Indirect interventions

*Separate contract with TK, allows TK insureds to benefit from and participate in defined health and preventive programs

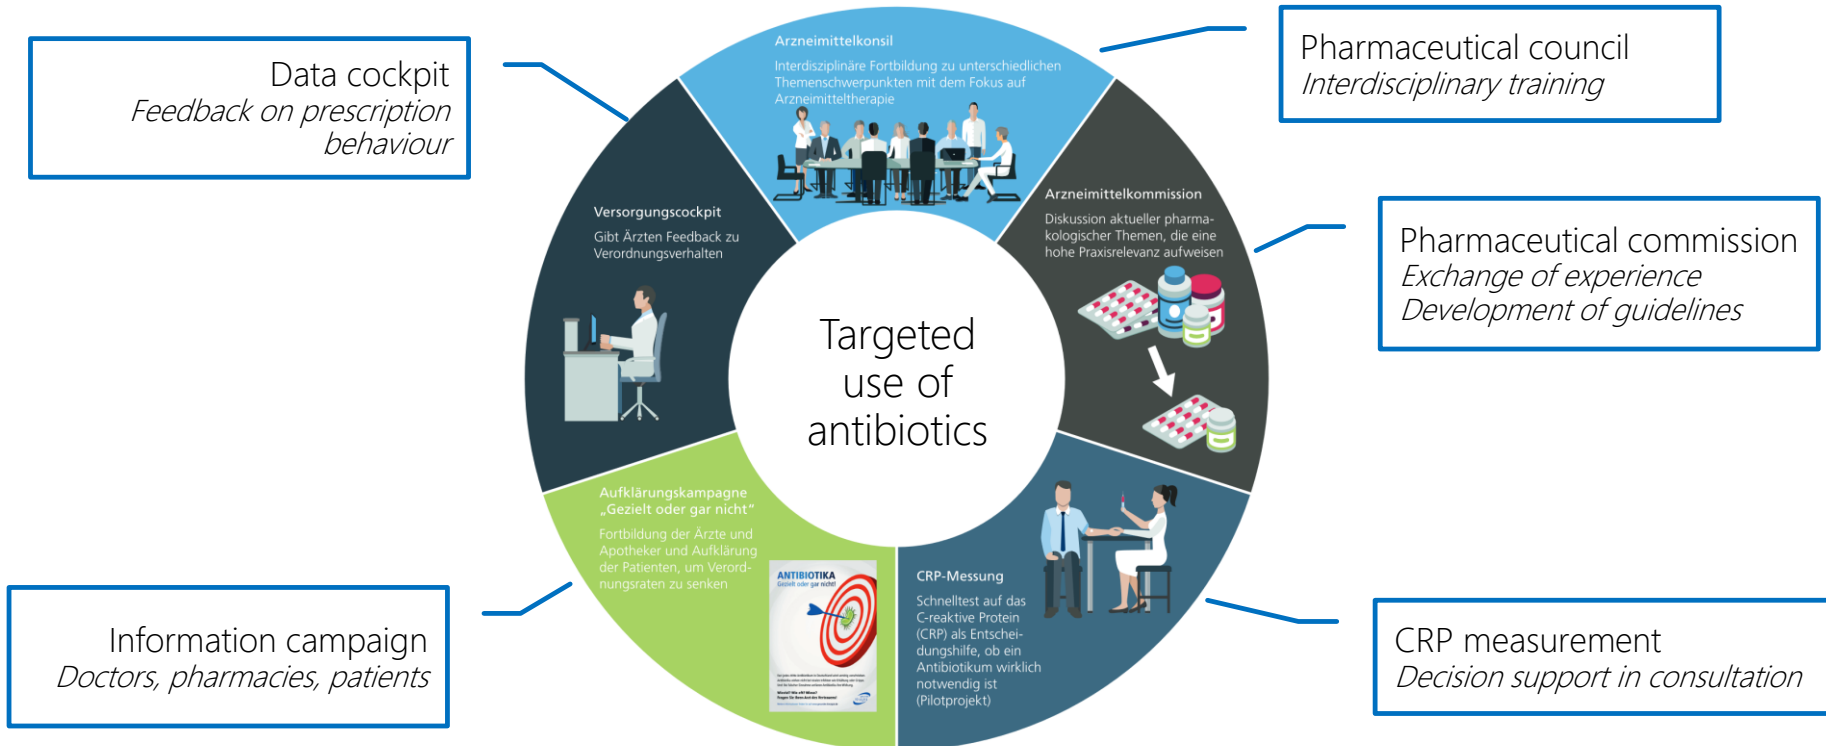

THE ANTIBIOTICS CHALLENGE

- ✓ For many diseases antibiotics help effectively and even save lives
- ✓ BUT antibiotic resistance occurs when bacteria change in response to the use of these medicines
- ✓ This is a worldwide problem and referable to the inappropriate use and prescription of antibiotics
- ✓ What does “inappropriate” mean here?
 - ✓ Too frequently used, esp. for small & non-bacteriological infections
 - ✓ Wrongly used, esp. due to wrong diagnosis or lack of info on alternatives
 - ✓ Not used according to recommendations / guidelines

[WHO 2011]

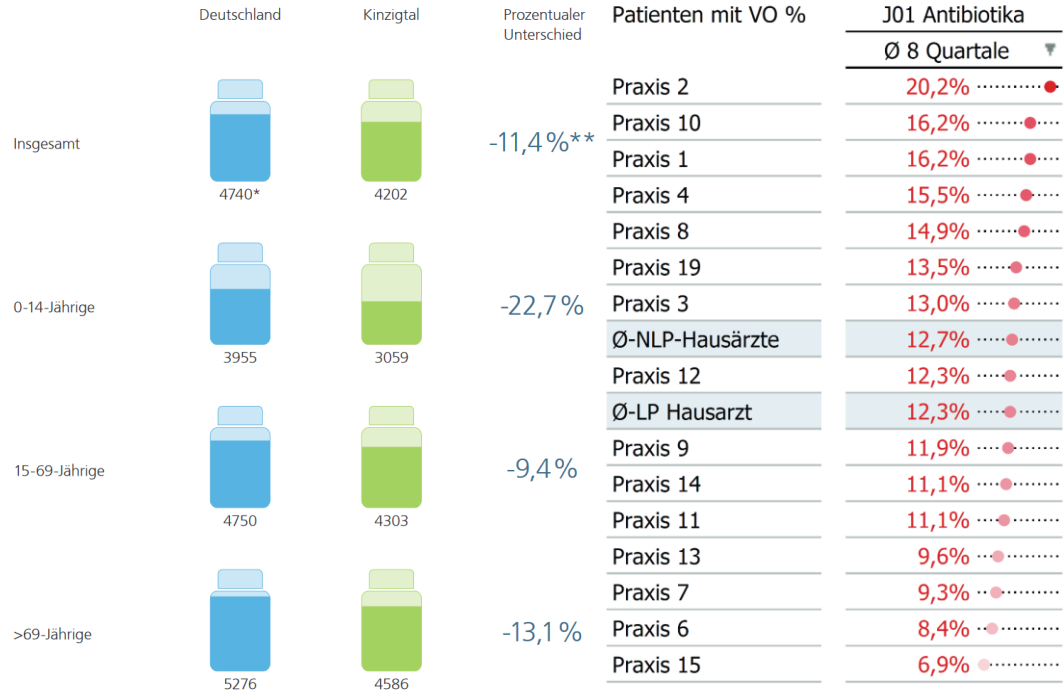

APPROACHING THE PROBLEM FROM DIFFERENT ANGLES

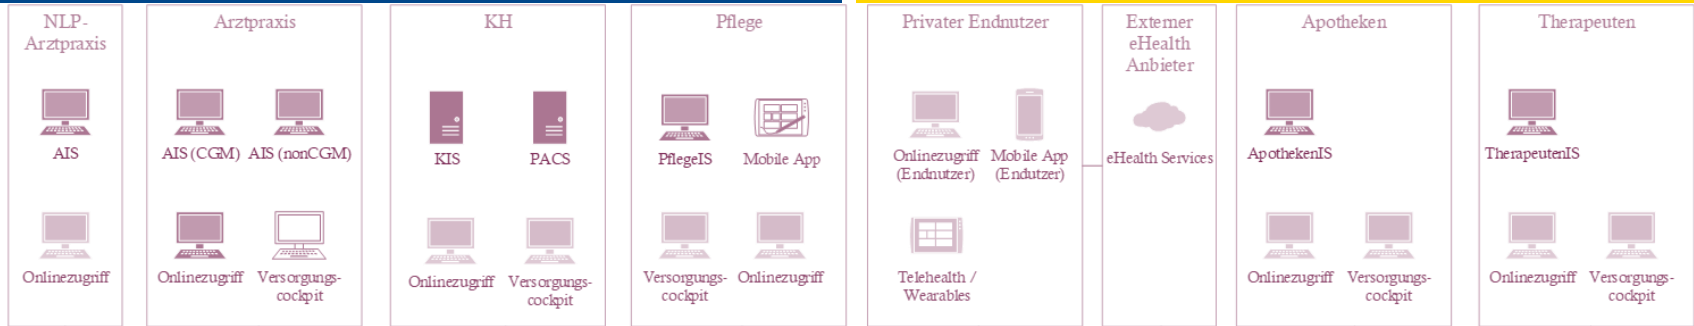

EVALUATION RESULTS

- Less prescription of defined daily doses (DDD) in Kinzigtal compared to Germany
- 2008 to 2014
- Esp. among children
- But: huge differences between practices

From different sources

FROM SYSTEM TO CASE LEVEL: THE POTENTIAL OF REAL-TIME DATA

- ✓ Cockpit data is used for care planning, e.g. development of new healthcare or prevention programmes
 - ✓ e.g. for more targeted prescription of antibiotics
- ✓ Some data (e.g. final data on hospital cost) take almost 2 years to arrive
 - ✓ Coming from the provider, being used in reimbursement negotiations with health insurance, then processed by health insurance, then passed on to us, then processed by us
- ✓ With real-time data comes a new possibility for real-time intervention design
 - ✓ Detecting trends impacting on outcomes in real-time and intervening on a case level
 - ✓ First step on the way to individualised pathways

EC-PROJECTS TWO ACTIVITIES THAT ARE INTRODUCED INTO ACT@SCALE

- ✓ Scaling up physical training as medical intervention for chronic patients_
 - ✓ In 2016 we started to integrate the value of physical training into the work of physicians for their patients + we want to connect the data from training sessions to the central medical record
- ✓ Scaling up health coaching and coordinating care and social activities
 - ✓ Since several years we piloted small scale health coaching in different ways to support life style changes of patients, coordinate social and health care and support the patients in their positive resources and their self management

Brutto-Benefit for AOK and SVLFG (LKK) 2016 for their insurees in Kinzigtal: 5,2 Mio. €*

Normcost, Ist-costx, contribution margin and number insurees of AOK and LKK in Gesundes Kinzigtal*

* SVLFG-Zahlen für 2016 noch nicht vorliegend, analog geschätzt wie in 2015

Solutions and / or Options in Germany

Metropolitan Region Rhein-Neckar

Three Federal States (HE, BW, RLP)

2,35 Mio. Inhabitants

15 Counties/ One-district cities

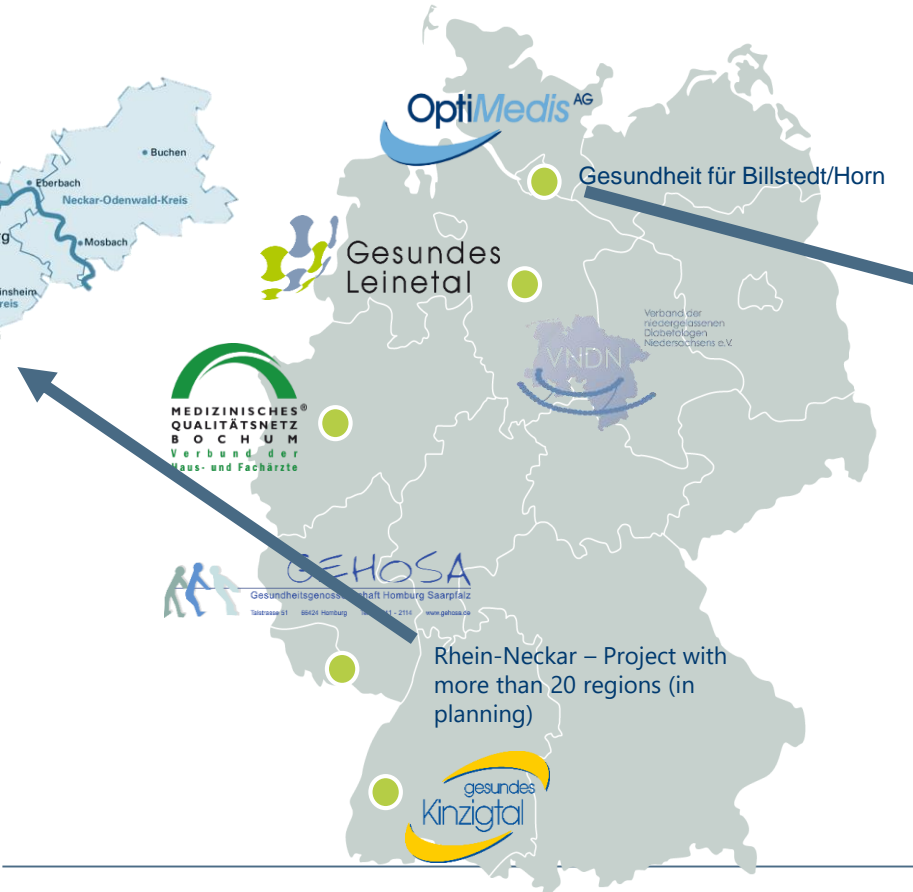

Center for health research (UK Heidelberg, UK Mannheim, EIT Health,...)

Big companies such as SAP, Roche, Heidelberger Druck, Freudenberg, BASF,...

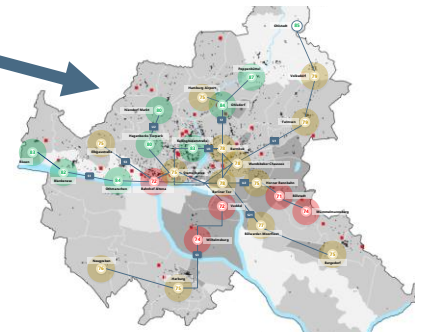

BMBF promoted „Health Region of the Future“

BMWi promoted region for model „Intelligent Networking“

Project „INFOPAT“ with focus on development of personalized, electronic patient record (PEPA)

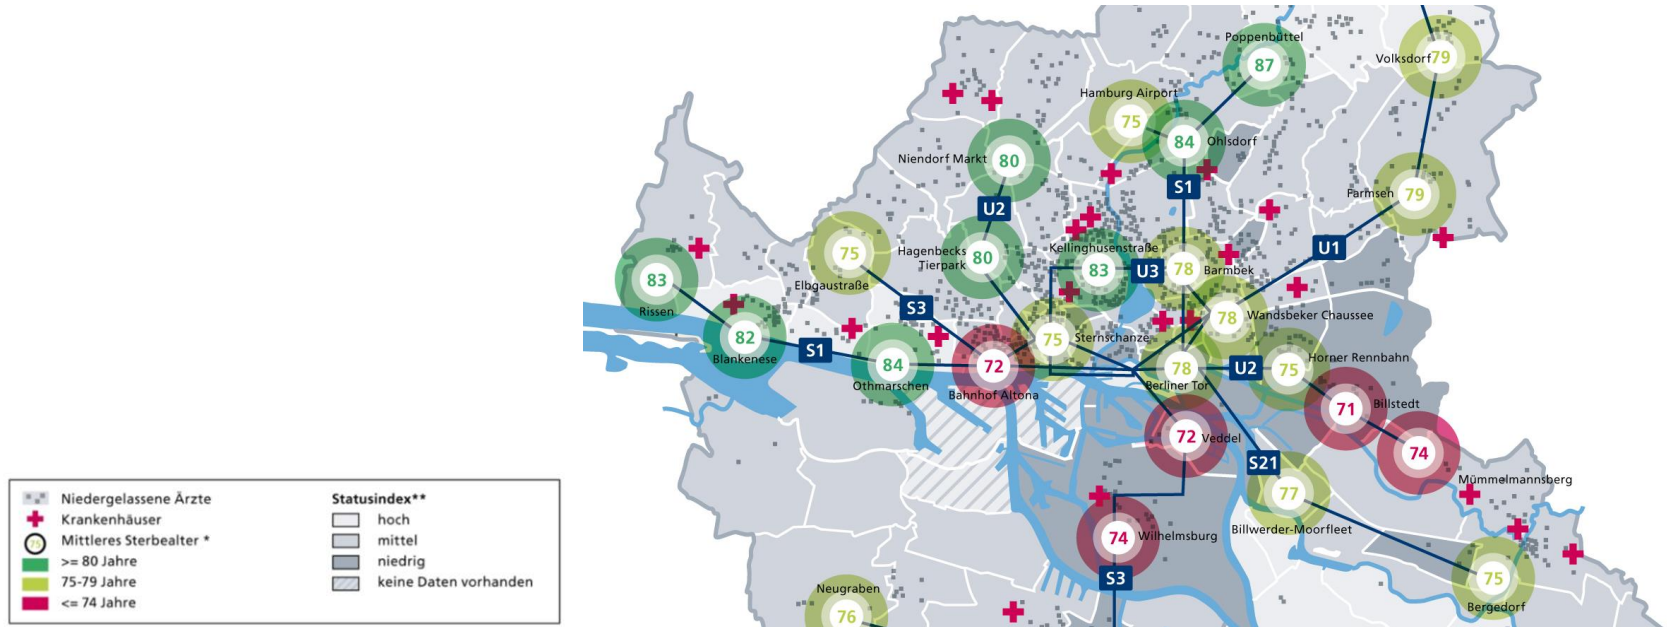

Since 2017 implementation of the care model in disadvantaged Hamburg boroughs (Billstedt and Horn) with funding of up to 6.3 million euros by the Joint Federal Committee

Our goal: to reduce the currently up to 16 years difference at time of death between Billstedt-Horn and other parts of Hamburg

(Below the average age at time of death of the AOK insureds at the postal code level)

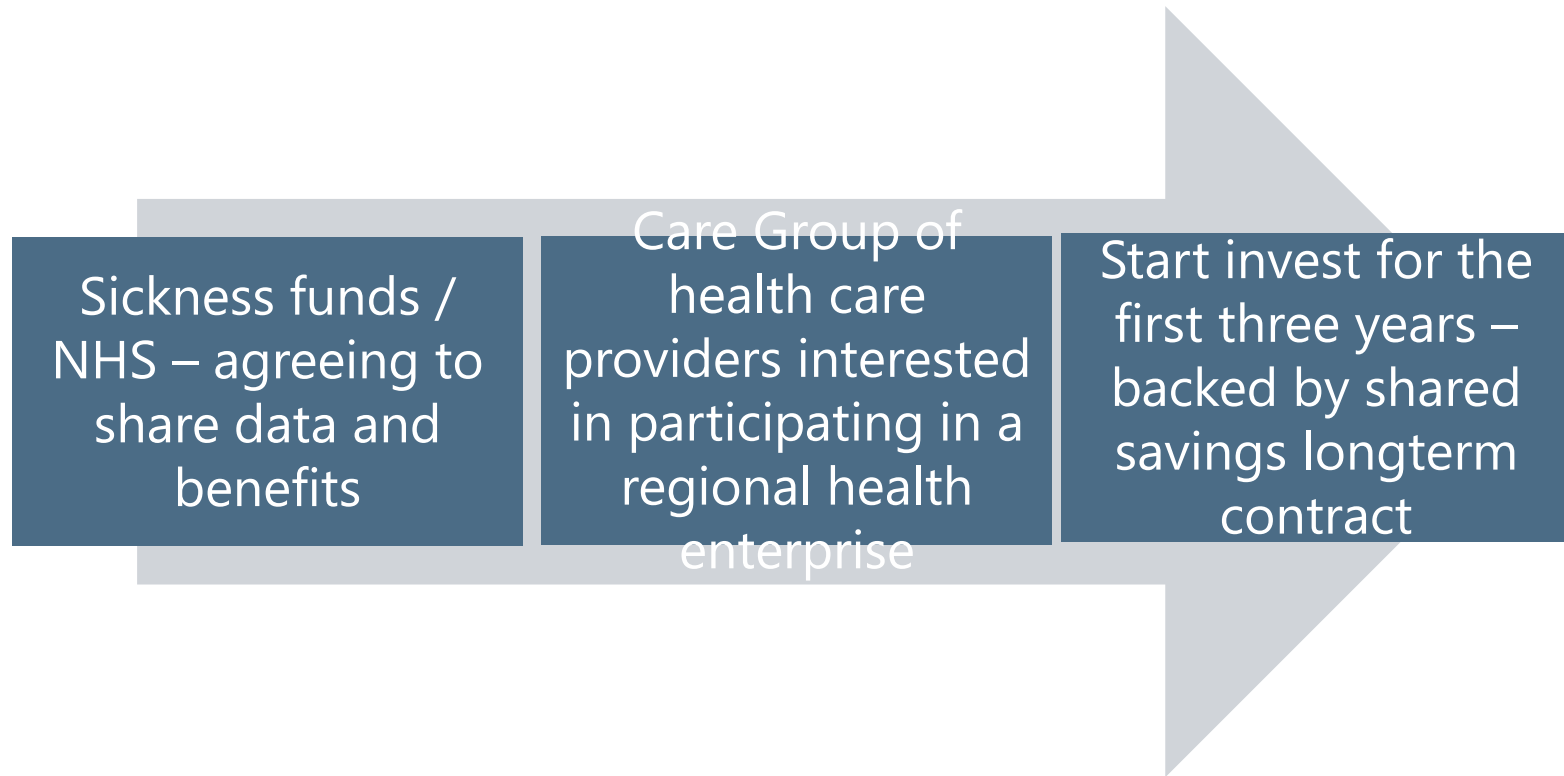

* basierend auf Routinedaten der AOK Routinedaten der Jahre 2010-2014 auf PLZ-Ebene
 ** Sozialmonitoring Integrierte Stadtentwicklung Bericht 2015 (niedrig > 5,88 > mittel > -5,88 > hoch)
<http://suche.transparenz.hamburg.de/dataset/sozialmonitoring-integrierte-stadtteilentwicklung-bericht-2015-anhang>

Some impressions of our work in Billstedt/Horn on ZDF-television

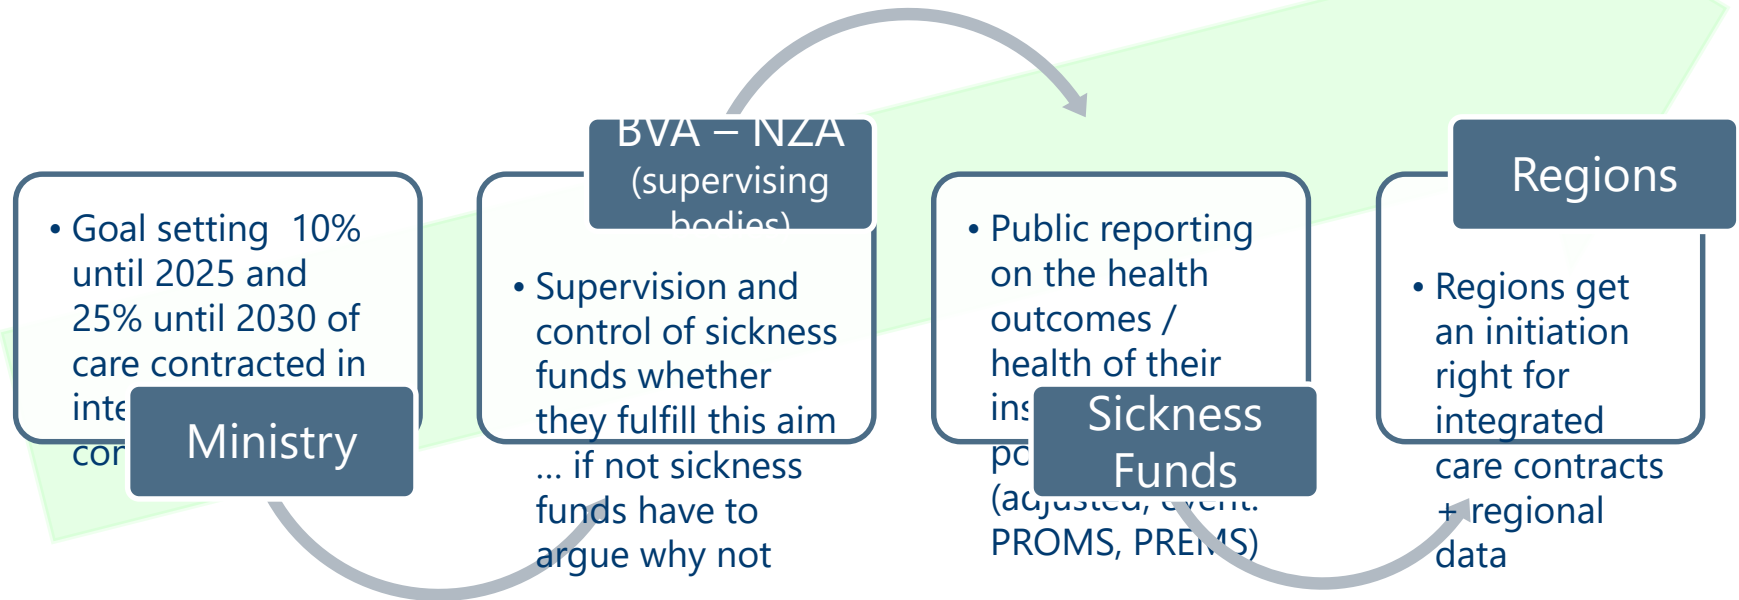

<https://www.zdf.de/nachrichten/drehscheibe/drehscheibe-clip-4-804.html>

Lessons learned – success factors

Everything else is developing in itself = self interest of the regional health enterprise

Proposition for Germany: Fostering innovation & integration

Take Home Messages What you can do for sustainable healthcare

Care providers together with local communities can produce health if you reward them for it

This is a transition, like sustainable energy: invest in local initiatives that save costs in future

We run up against the fragmentation and financial comfort of the current system

Support is needed from the policy makers to make current system less comfortable

Make startup of sustainable healthcare easier to tip the balance

Horizontal integration across settings

a. Unintegrated

b. Partially integrated

c. Horizontally or vertically integrated

Economic Impact of Integrated Care Models for Patients with Chronic Diseases: A Systematic Review

Melissa Desmedt, MSc^{1,*}, Sonja Vertriest, MSc¹, Johan Hellings, PhD^{1,2}, Jochen Bergs, MSc³, Ezra Dessers, PhD⁴, Patrik Vankrunkelsven, PhD⁵, Hubertus Vrijhoef, PhD^{6,7,8}, Lieven Annemans, PhD⁹, Nick Verhaeghe, PhD⁹, Mirko Petrovic, PhD¹⁰, Dominique Vandijck, PhD^{1,11}

VALUE IN HEALTH 19 (2016) 892 – 902

Vertical vs. Horizontal Programs

Disease control programs	People-centered primary care
Focus on priority diseases	Focus on health needs
Relationship limited to program implementation	Enduring personal relationship
Program-defined disease control interventions	Comprehensive, continuous and person-centered care
Responsibility for disease-control targets among the target population	Responsibility for the health of all in the community along the life cycle
Population targets of disease-control interventions	People are partners in managing their own health

World Health Report 2008, "Now, More than Ever", WHO

Gesundes Kinzigtal: fantastic concept; focus on horizontal integration of settings; great results,...!
But... Still main focus on vertical programs?

PLUS: some issues

- Upfront investment

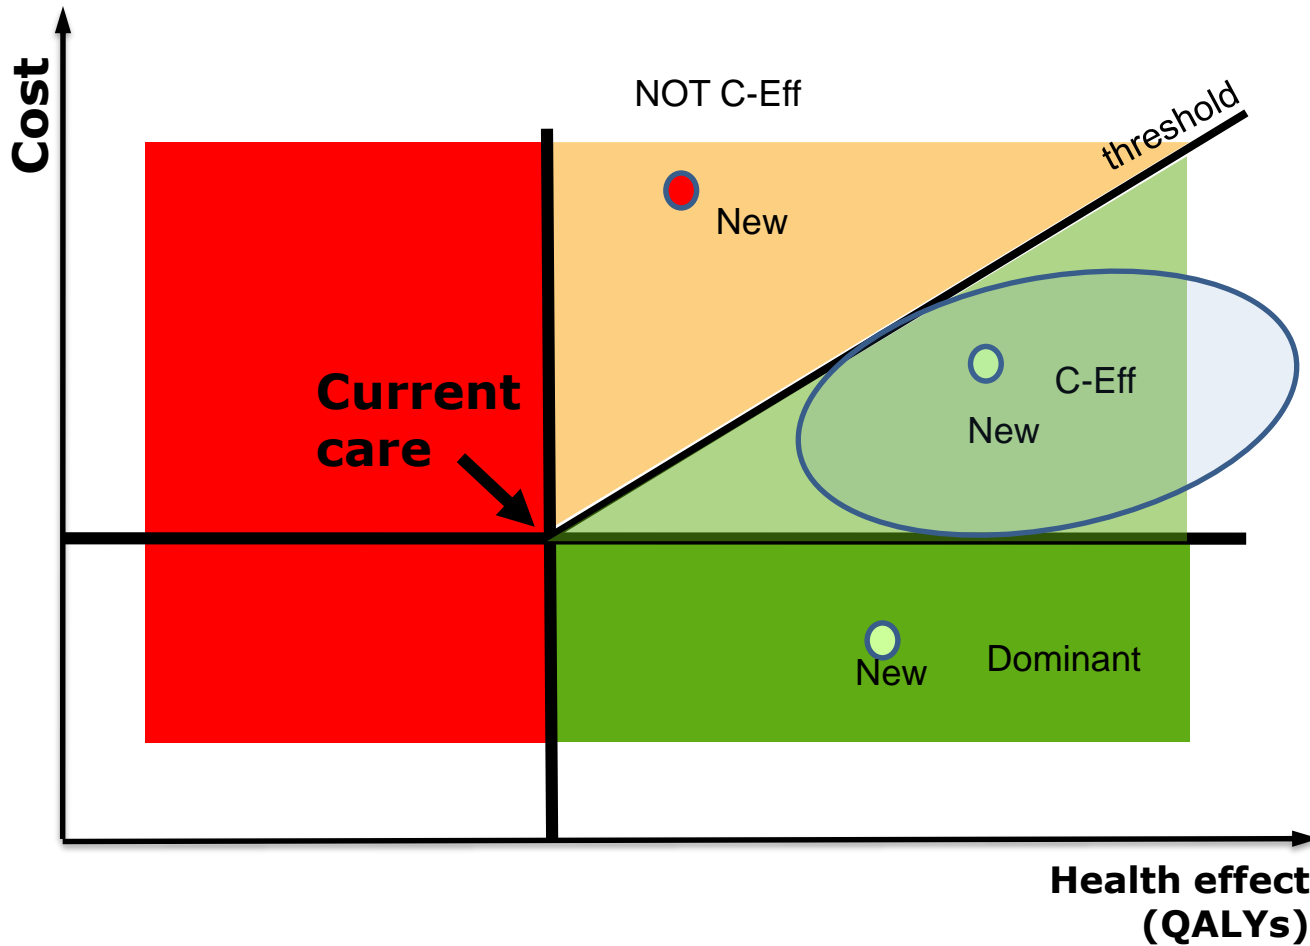

- Trust between Physicians and health insurers

- Shared *savings* paradigm

Cost-effectiveness: the NE quadrant

Pelckmans Pro 2018

The alternative: FULL healthcare networks

**Multi-
organizational
Network
"Join"**

CORTEXS project www.cortexs.org

1st LEVEL

- Health: GP, dentist, pharmacist, nurse, psychologist, physiotherapist, osteopath, dietician, occupational therapist
- Home adaptation, family help, ...

2nd LEVEL

- Specialist, Hospital Network

Integration of activities + care substitution

Benefits

- Less hospital admissions
- Less emergency visits
- Less non-evidence based surgery
- Less readmissions
- More focus on prevention
-

Hospital networks

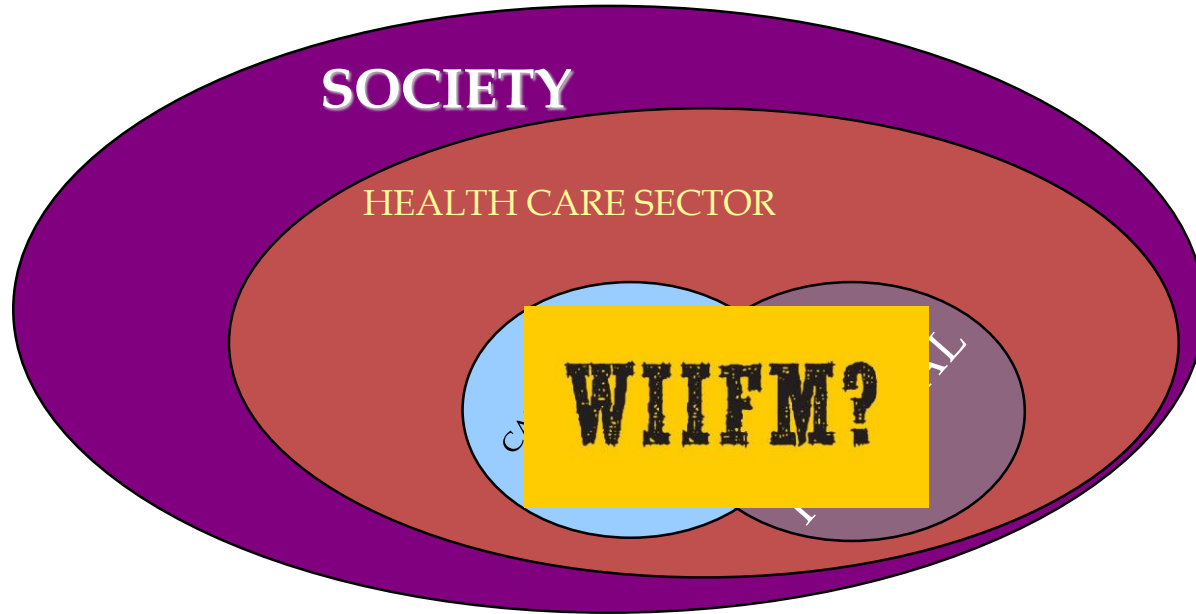

1. Less supply induced demand
2. Decreasing n of beds
3. Higher quality

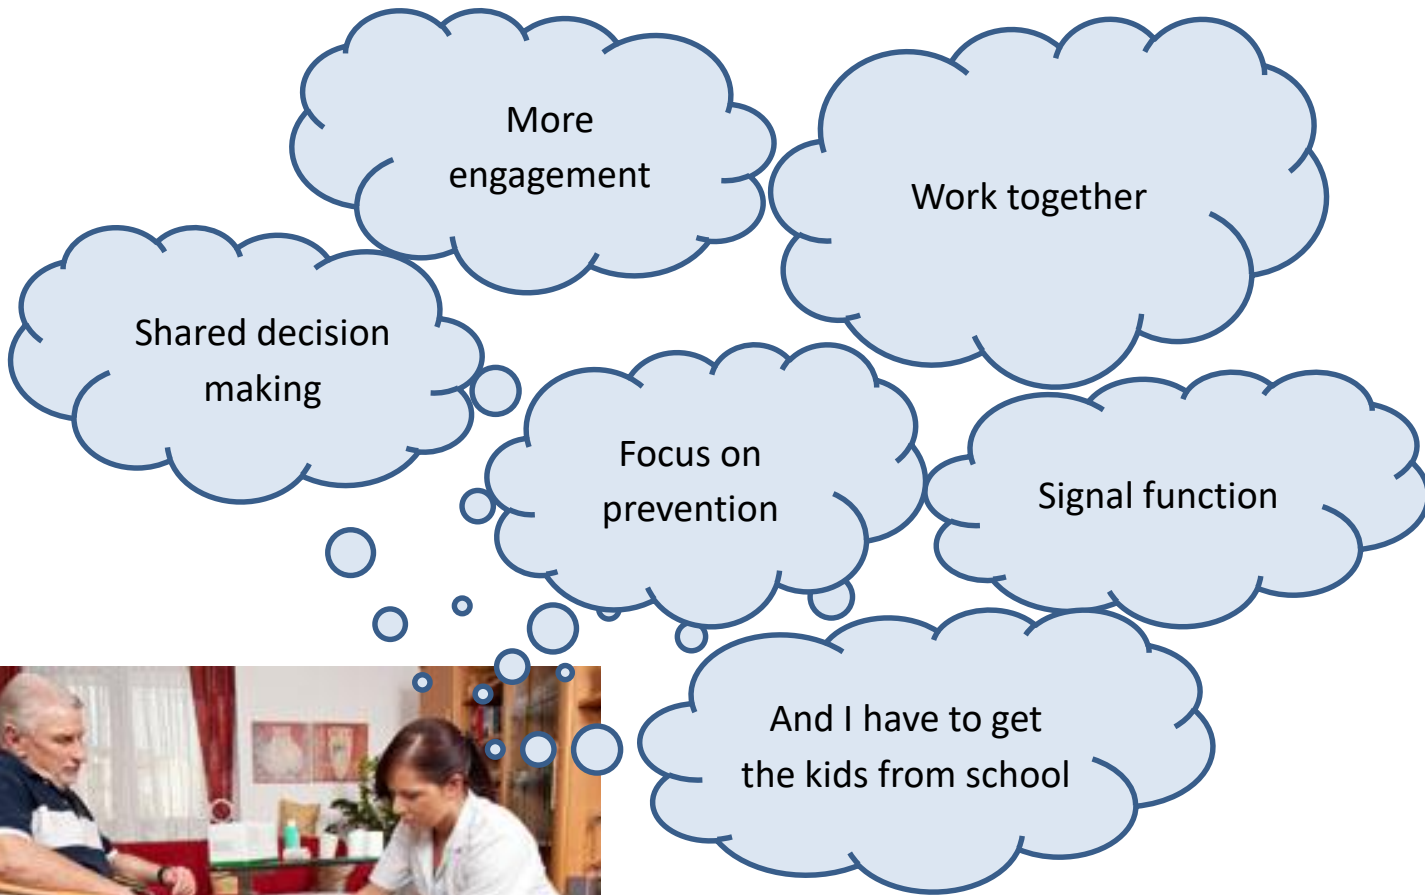

Gouvernemental
agreement 2014

Voor de behandeling van moeilijke of zeldzame aandoeningen of in geval van zeer dure technologie of infrastructuur evolueren we naar gespecialiseerde ziekenhuiszorg, geconcentreerd in gespecialiseerde centra, ingebed in een klinisch netwerk tussen ziekenhuizen.

Challenge: different perspectives

Intrinsic Motivation

Extrinsic Motivation

Solution 1: introduce more episodic payments

Fixed amount per patient/insured per time period:
pay to maintain health

- + decreased risk for overconsumption
- + improved access
- + more focus on prevention

Possible examples

- Cardiologist: telemonitoring in cardio
- Psychiatrist: schizophrenic patient after discharge
- Oncologist: app for early reporting of adverse events

Solution 2: More Pay for Performance

- ‘the systematic and deliberate use of payment incentives that recognize and reward high levels of quality and quality improvement’. (The Institute of Medicine, 2007)
- Also called ‘Pay for Quality’

From Paying to do things
to
Paying to do things right
and
Paying to do the right
things

Pitfalls of pay for quality (P4Q)

1. Definition of performance **BOTH**
 - Effective or **cost-effective**?
 - Or cost saving? (P2SM)
2. *Size* of the financial reward not well studied **10%**
3. Pay for improvement or for achievement? **BOTH**
4. Number of criteria to be applied?
 - Too few → reduced attention for other care **VIP2**
 - Too many → high costs for organizing, audit, engaging physicians *continuously*
6. Fragmentation (in stead of coordination) **PAY GROUPS**
7. Implementation problems (acceptable, applicable, need for adequate *information technology*...) **MIMIQ-model**
8. Gaming **EHEALTH**

Implementing P4P step by step

MIMIQ: Model for Implementing and Monitoring Incentives for Quality

System currently investigated in first line

(adapted from Schrijvers)

Final points of attention

- Equity!

- Health promotion!

HEALTH
PROMOTION
STRATEGIES

- Quality of life health professional!

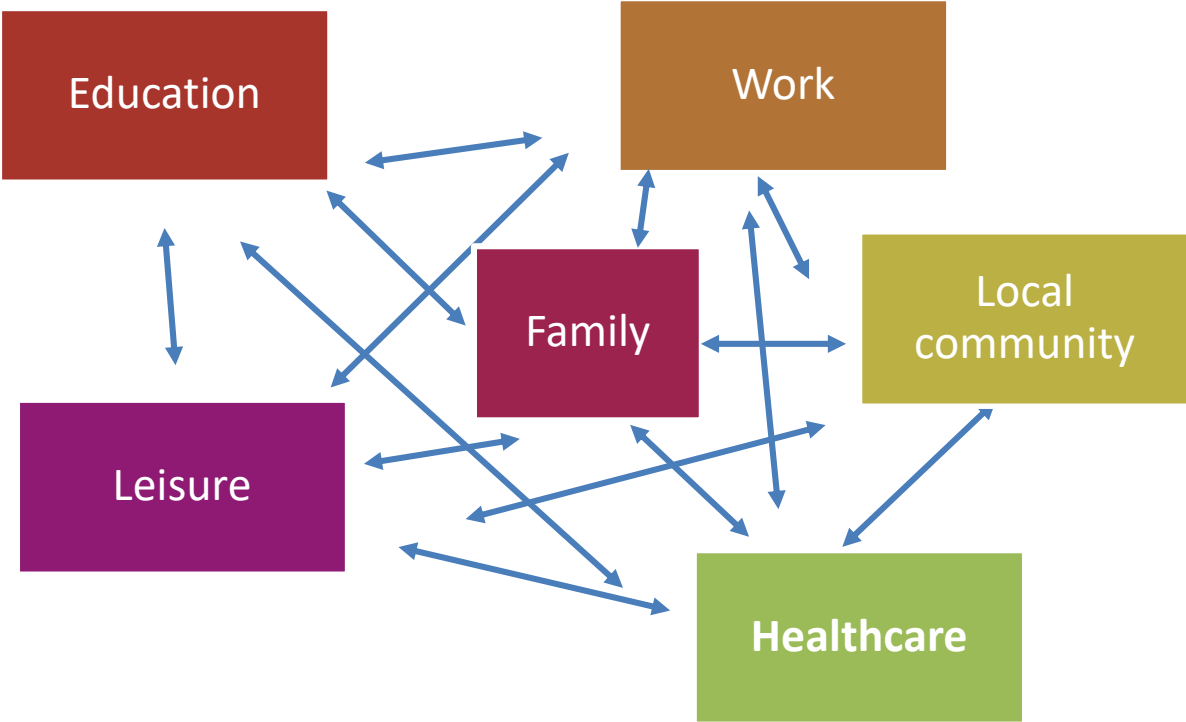

Prevention performance in Europe

- Tobacco
- Alcohol
- Nutrition
- Fertility
- Mother and child
- Infectious diseases
- Hypertension
- Cancer screening
- Traffic
- Air pollution

Mackenbach & MacKee. European Journal of Public Health, Vol. 23, No. 2, 195–344, **2013**

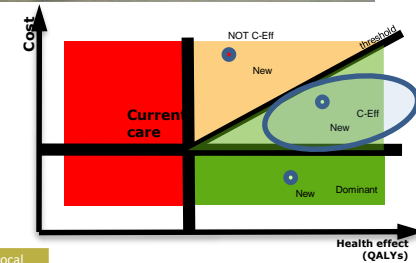

Health is in all policies

In conclusion

1. Truly integrated care requires
 - One large ECO-system
 - Integrated – blended – financing
 - Perfect health information system
2. The true triple aim: quality; solidarity, sustainability
3. Upfront investment (cf. Kinzigtal) required
4. Not only P2SM. Focus on the NE quadrant
5. Supraproportional investment in health promotion

EVERYTHING WILL
BE OK IN THE END.
IF IT'S NOT OK,
IT'S NOT THE END

Digitale transformatie in welzijn en zorg Meer dan technologie

Ann Ouvry voor
Health Community Congres 2018

Ann Ouvry

CEO D&A medical group

- Geboren in Gent
- Sinds 1990 woonachtig in Nederland
- Wiskunde aan de Universiteit Gent
- Opleiding in software engineering en bedrijfskunde
- Pionier bij Philips medical systems op het gebied van IT voor zorgapplicaties
- 2001: oprichter D&A medical group, advies en project management voor digitalisering en procesoptimalisatie in zorg en welzijn

Digitale transformatie

Digitale Transformatie — Definitie

Digitale Transformatie gaat over de toenemende adoptie van digitale middelen en processen binnen alle aspecten van een organisatie met als doel om de klantwaarde en prestaties van organisaties radicaal te verbeteren.

Eerste golf

Digitalisering
operationele
processen

Belangrijkste motieven om te digitaliseren

- Complete zorgregistratie en facturatie
- Efficiency, met name op het gebied van logistiek
- Behoeftte aan delen van informatie om veilige zorg te kunnen blijven leveren
- Kostenbeheersing

Health expenditure as percentage from GDP										
Year	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Country										
<u>United States</u>	14,7	14,9	15,3	16,4	16,4	16,4	16,4	16,4	16,6	16,9
<u>Switzerland</u>	9,8	9,6	9,8	10,4	10,5	10,6	11,0	11,2	11,4	11,5

Technologie staat digitalisering zorg niet in de weg

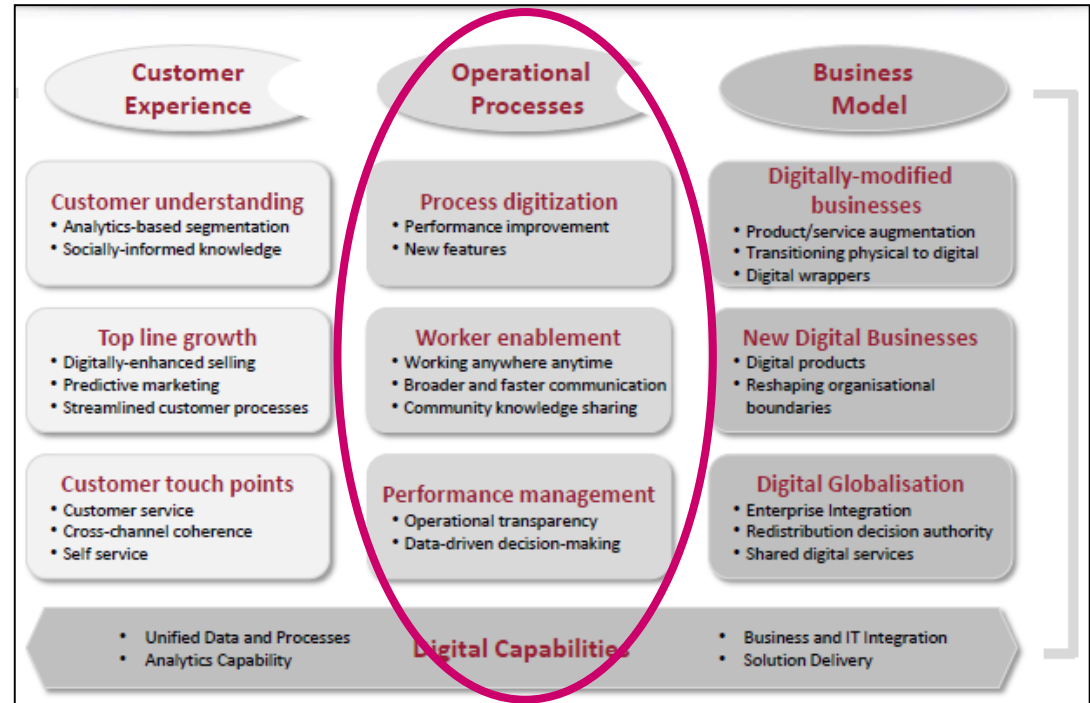

Lessons learned: digitalisering is 80% zorgtransitie, 20% IT

Implementatie van een EPD vergt:

- Governance en Leiderschap
- Betrokkenheid van professionals
- Opleiding van zorg professionals
- Denken in processen en prestaties
- Professionele implementatie aanpak en project management
- Professionele IT infrastructuur en organisatie

Patiëntdata in veel Europese landen grotendeels digitaal

How would you rate your organisation in terms of digital maturity?

[mean values; scale from 1 "not mature at all" to 10 "extremely mature"; only participants who are working in a health facility]

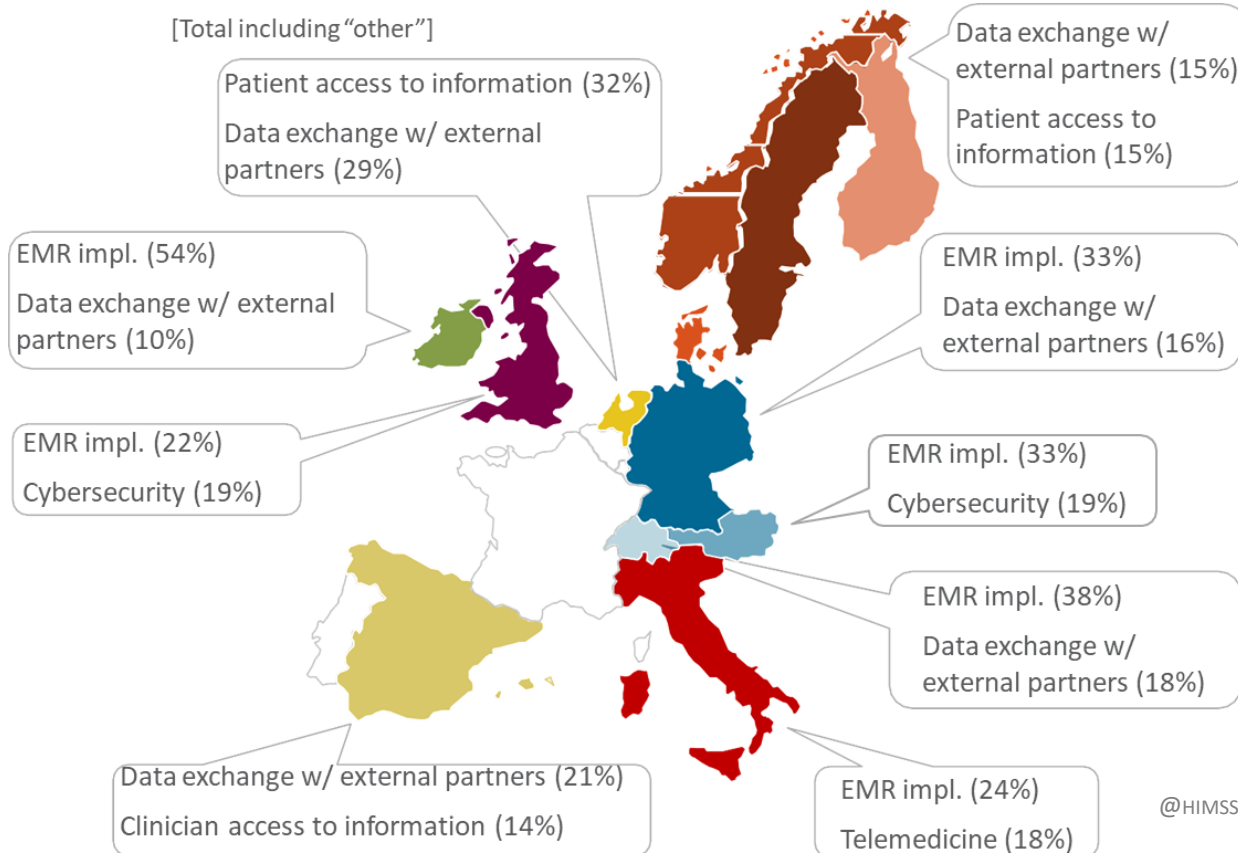

What percentage of patient data in your organisation is digitised?

[Scale from 0% - 100%; only participants who are working in a health facility]

eHealth prioriteiten in Europa: implementatie EPD, informatie voor patiënten en informatie uitwisseling

Digitalisering zorg in NL en België verschillende snelheden

Nederland

- Alle huisartsen, ziekenhuizen en care instellingen werken met een digitaal patiëntendossier
- Professionele, grootschalige implementaties in ziekenhuizen
- Focus verschuift naar patiënt participatie en informatie uitwisseling
- NL worstelt met delen van informatie tussen zorgpartijen

Ehealth monitor 2017 Vrijwel alle huisartsen kunnen digitaal medische gegevens uitwisselen met ziekenhuizen, laboratoria en huisartsenposten. Verpleegkundigen in de ziekenhuiszorg en ouderenzorg dragen medische gegevens veelal nog op papier over.

België

- Accelerator programma implementatie EPD in alle Belgische ziekenhuizen
- Beperkte IT budgetten
- EPD nog veel van de IT en te weinig van de zorg
- Nationaal eHealth-Platform voor delen van informatie gaat op punten verder dan NL

Minister De Block neemt maatregelen na problemen eHealth-platform

Tweede golf

Participatie
van patiënten

Patiënt wordt actieve participant in zorgproces

PERSBERICHT Vlaams Patiëntenplatform vzw
Heverlee, 18 april 2018

Patiënten verwachten veel van de online gezondheidsportalen

66% van de patiënten gelooft dat online inzage in het patiëntendossier de communicatie met zorgverleners zal verbeteren. Dat blijkt uit een bevraging die het Vlaams Patiëntenplatform organiseerde naar aanleiding van de Europese dag van de rechten van de patiënt op 18 april. 68% van de 581 patiënten die deelnamen aan de bevraging gelooft ook dat ze door die online inzage hun zorg meer in eigen handen kunnen nemen.

Traditional **uni-directional**
research-centered view

New **bi-directional**
patient-centered view

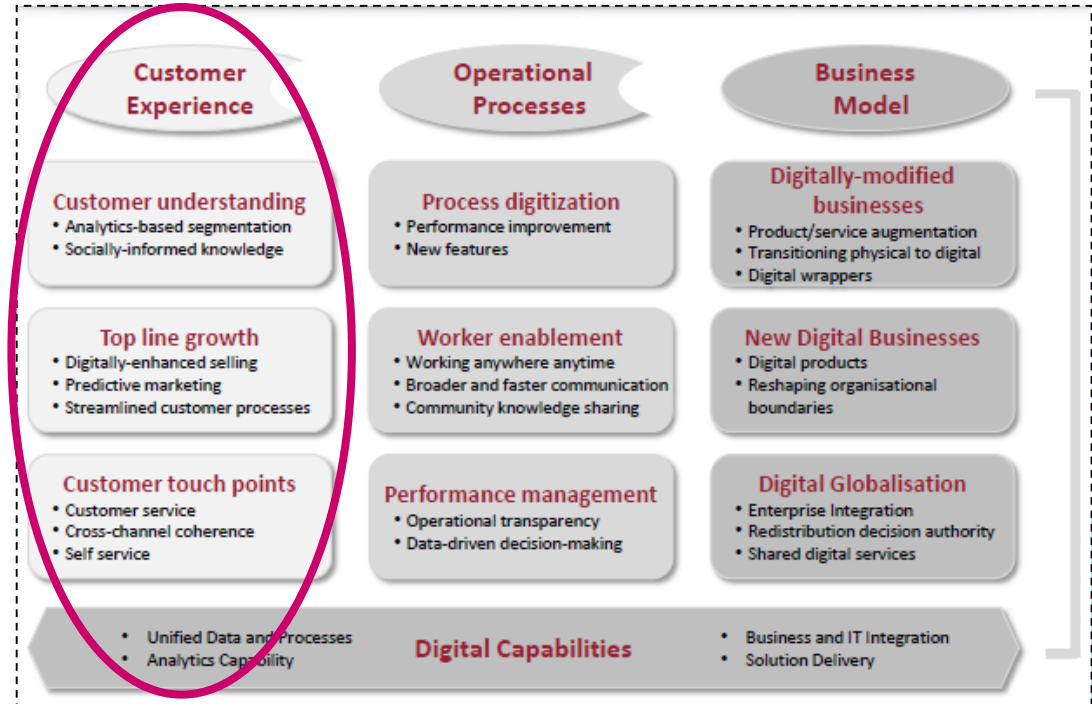

eHealth is een maatschappelijke innovatie

eHealth vergt een inspanning van alle betrokkenen:

- Zorg: bereidheid om informatie te delen en ontwikkelen van self-service diensten
cultuurverandering en transparantie
- Overheid: financiering en regie op standaarden
- Burgers: gezondheidseducatie
- Opleidingsinstituten: scholing eHealth vaardigheden

Grote toename van patiëntportalen

Nederland

VIPP

MedMij
Grip op je eigen
gezondheidsgegevens

**2/3 ZIEKENHUIZEN MAAKT GEBRUIK VAN
PATIËNTENPORTAAL**

**Miljoenenprogramma VIPP uit de
startblokken: meer regie voor patiënt**

Doelstelling VIPP: Iedere zorginstelling heeft op 31 december 2019 een beveiligd patiëntenportaal en/of een link naar een Persoonlijke Gezondheidsomgeving waarin de zorginstelling gestandaardiseerd medische gegevens voor de patiënt kan uploaden

**Cliëntportaal en pgd bezig aan opmars in
caresector**

België

e-gezondheid.be

e-santé.be

**Nieuw overheidsportaal 'Mijn
gezondheid' bundelt alle
gezondheidsgegevens burger**

"Wij zijn na Zweden het volgende land om zo'n portaal aan onze patiënten te geven, en ik denk dat we daar een beetje fier op mogen zijn", besluit De Block.

Tweede golf

Integrale zorg

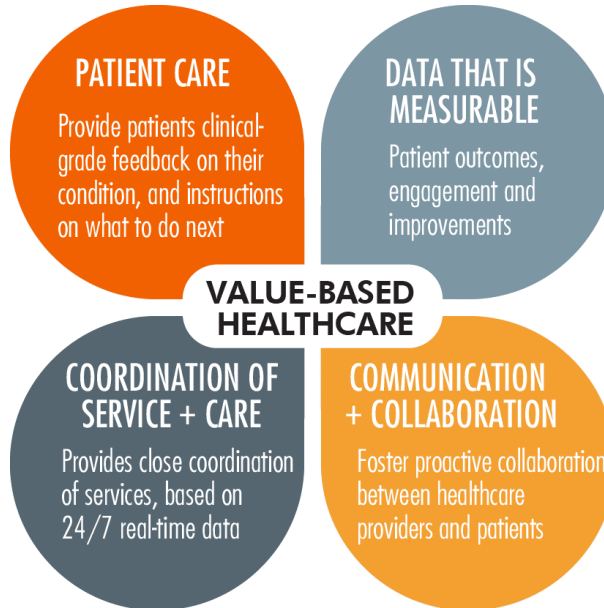

Organisatie rondom de patiënt ipv rond zorgaanbieder

Value based healthcare

Integrale zorg: delen is vermenigvuldigen

Integrale zorg vergt een verandering in het zorgstelsel:

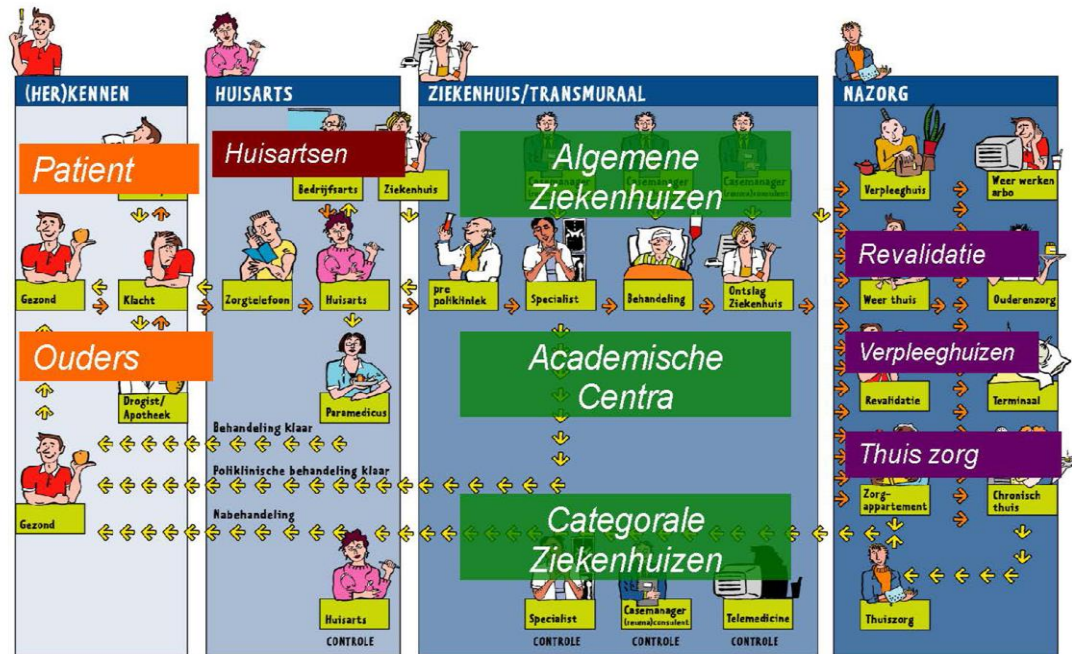

Leiderschap en samenwerking op regionaal niveau

Passende financiering

Informatie delen tussen de lijnen conform afgesproken standaarden.

Dit kan op verschillende manieren:

- Regionaal EPD
- Regionaal of landelijk platform
- Directe uitwisseling

2011: landelijk EPD sneuvelt in Eerste Kamer

Toen het wetsvoorstel voor een landelijk elektronisch patiëntendossier werd verworpen, gaf het ministerie van VWS de regie over de landelijke uitwisseling van patiëntgegevens uit handen. Artsen en zorgverleners zijn nu afhankelijk van fax, post, WhatsApp en telefoon.

Integrale zorg: best practice NL

1,5 lijnszorg Dermatologie reduceert zorgconsumptie in 2^e lijn

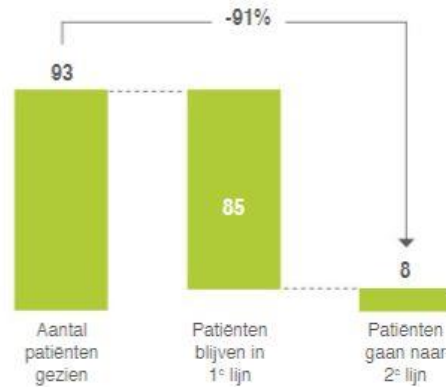

Verwijzen vanuit 1,5 lijn

Tot september 2015: 1 praktijk

Verwijzen vanuit 1,5 lijn

Vanaf september 2015: 9 praktijken

Toekomstbestendige zorg voor de regio:

Ziekenhuis Bernhoven in samenwerking met huisartsen en de zorgverzekeraar zorgen voor lagere productie in het ziekenhuis

Informatiedeling is een uitdaging.

Digitale zorg in Nederland

Online contact

Telemonitoring

Best practice: telemonitoring voor COPD patiënten

Via de dienst COPD InBeeld worden patiënten in Oost-Nederland op afstand gemonitord door verpleegkundig specialisten van het Slingeland Ziekenhuis en thuiszorgmedewerkers van zorgorganisatie Sensire. Zorginnovatiebedrijf FocusCura ontwikkelde de technologie. COPD InBeeld leidt tot minder ziekenhuisopnames, zo blijkt uit een analyse die Sensire en het Slingeland Ziekenhuis uitvoerden op basis van de pilot die sinds 2010 loopt. Reden voor zorgverzekeraar Menzis om de financiering van de dienst [COPD InBeeld](#) vanaf 2017 over te nemen. Menzis, het Slingeland Ziekenhuis en Sensire gaan een samenwerking van drie jaar aan.

Digitale zorg in België

POSSIBLE

1) *Appointments*

Booking and managing online appointments with a healthcare provider or group practice

NOT YET POSSIBLE

Booking and managing online appointments with multidisciplinary care providers in a care pathway

2) *Consultation and patient follow-up*

Remote consultation for first contact

Reimbursement code: there is no nomenclature code yet for digital contact and advice

Remote consultation in the context of patient follow-up

Recommending and prescribing apps to your patient (only as a formality) and using them together

Structured reimbursement model for apps (but: on 29/09 [Partena](#) decided to reimburse [Fibricheck](#)-see below)

Reimbursement of prescribed apps has started: on 29/09 Partena was the first to decide to reimburse Fibricheck

Aanzet financieringsmodel voor medische apps

🕒 16 Februari 2018 👤 door P.S.

Monitoring and patient follow-up using apps for heart rate, blood pressure, wound healing etc.

“App pharmacy” for the healthcare provider

Bron: [dash_+](#)

A photograph of a public square or courtyard. In the foreground, a man with glasses, wearing a red jacket and a dark scarf, is sitting on a wooden chair and reading a newspaper. He is looking down at the paper. In the background, several other people are walking or sitting at tables. The scene is outdoors with trees and buildings. Two green hexagonal shapes are overlaid on the right side of the image, containing text.

Techbedrijven nemen deel van de zorg over

Waarom techbedrijven massaal op medische data azen

Philips kondigt samenwerking aan met Amazon. Ook Apple en IBM halen banden aan. Hun doel? Gezondheidsdata.

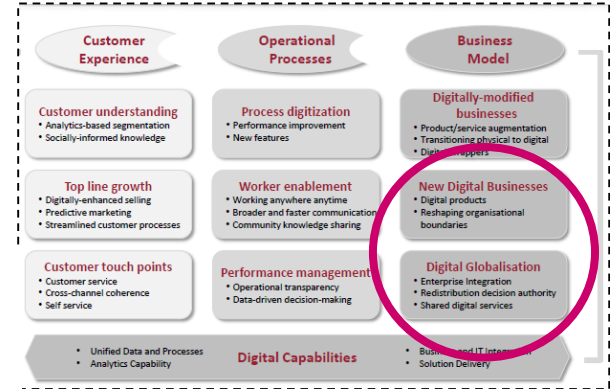

De toekomst van patiëntloze ziekenhuizen

Ziekenhuizen zonder patiënten. Niet omdat men geen zorg meer nodig heeft, maar omdat patiënten door middel van technologie thuis in de gaten worden gehouden door artsen en verpleegkundigen. Die voorspelling doet Henk Valk, topman van Philips Benelux.

‘Techreuzen nemen 20 procent ziekenhuiszorg over’

Advies

Zorgaanbieders

1. Organiseer digitaal leiderschap
2. Leid zorgprofessionals op
3. Implementeer digitale technologie en diensten op een professionele manier
4. Betrek uw patiënten
5. Omarm best practices
6. Doe het goede, het betere komt later. Start nu!

Overheid

1. Stimuleer en faciliteer ehealth educatie van burgers
2. Neem barrières weg
3. Neem ehealth vaardigheden op in de curricula van zorgprofessionals
4. Dwing interoperabiliteit af tussen digitale zorgsystemen
5. Maak een wettelijk kader voor ehealth
6. Stimuleer en faciliteer implementatie

Ik wens u veel succes op uw
weg naar betekenisvolle
digitale zorg

Financial implications Belgium

- **Current financial situation of Belgian hospitals is worrying:**
- 1 in 3 was loss-making in 2016
- 1 in 7 has insufficient cash flow to cover maturing debts
- And the real pressure on resources still has to come
- Without significant reform, the health care sector will have to cut one quarter of spending over next 20 years

WAAR HALEN WE DAT GELD ?

'We Will' Campaign surpasses \$4 billion with gift from Bon and Holly French

POSTED ON THURSDAY, SEPTEMBER 6, 2018

A major new commitment from Northwestern University trustee and alumnus T. Bondurant ("Bon") French '75, '76 MBA and his wife, Hollis ("Holly") S. French, has pushed fundraising for **We Will. The Campaign for Northwestern** past the \$4 billion mark and well beyond its original goal of \$3.75 billion, nearly two years ahead of schedule.

The "We Will" Campaign was launched publicly in March 2014 with the joint goals of raising \$3.75 billion from at least 141,000 supporters. Now, thanks to 149,094 Northwestern alumni, parents and friends, Campaign fundraising stands at a record \$4.06 billion.

"I am immensely grateful to Bon and Holly, who epitomize the Northwestern spirit through their long-time generosity and volunteerism, and to so many others who have helped us get where we are today," Northwestern President Morton Schapiro said. "Their generosity has enabled us to reach our goals faster than we ever imagined—and raised our expectations for the future of the University."

Why don't we care more about prevention?

Health spending on prevention

Source: Eurostat

What is the impact of fee-for-service?

Medical Practice ... follows the money !

Do we need to organise our hospitals differently?

Curative care beds

Source: OECD

Belgium today : the “ average hospital” inefficiencies (Portella, 2014)

- 5% of beds occupied by chronic diseases
- 7% of beds occupied by readmissions < 10 days
- 19% of beds have a LOS > 30 days (27% > 20 days)
- Hence, more than 30% of bed occupancy is inappropriate for an “acute hospital” (and 70% of these patients are 80+ years old)
- Hence, current acute hospital bed offer and usage is poorly adapted to the demand

Why do we keep a system in place where 1 out three dollars/euro's spent is pure waste...

Oncology drug prices

Arts-assistenten kiezen resoluut voor deeltijdse opleiding

21/09/18 om 04:50 - Bijgewerkt op 20/09/18 om 19:33
Bron: Artsenkrant

Vier op vijf artsen in opleiding staan '(zeer) positief' tegenover het principe van een deeltijdse opleiding. Dat blijkt uit een enquête onder 250 assistenten aan de UZ Gent waarover Artsenkrant vrijdag schrijft. De resultaten gelden moeiteloos voor alle universiteiten.

1
Keer gedeeld

Lees later

© iStock

Sinds begin 2018 bestaat wettelijk de mogelijkheid om een deeltijdse opleiding tot arts-specialist te volgen. Uit een bevraging onder 250 Gentse assistenten blijkt dat 200 onder hen (80%) positief staan tegenover het principe van de deeltijdse opleiding. In casu gaat het dan over een vier vijfde opleiding - lees: 48 uur in plaats van het meer gebruikelijke 60 uur.

Een over groot aantal brengt hen in op weg collega's die nu een deeltijdse opleiding

Why an investor at Andreessen Horowitz thinks software is the future of healthcare

Lydia Ramsey  
Nov 12, 2016, 8:30 PM  405

 FACEBOOK  LINKEDIN  TWITTER  EMAIL  PRINT

It's not exactly surprising that a partner of a venture capital firm with a tagline that "software is eating the world" thinks the same could be said for the drug industry.

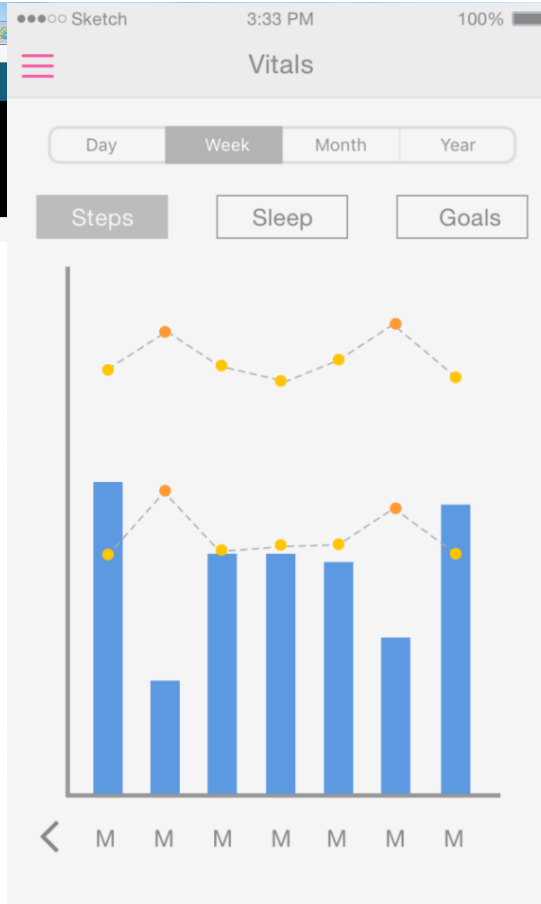

Vijay Pande, a general partner at Andreessen Horowitz, runs the firm's bio fund. So far, the fund's made investments in companies including Freenome, which is developing a blood test that screens for the earliest signs of cancer, and Q, a startup that wants to quantify the human physiology.

Vijay Pande, General Partner at Andreessen Horowitz

Andreessen Horowitz

Pande's argument, as he explained to Business Insider, is that as health-technology gets better,

A screenshot of a news article from MedCityNews. The title is "Mining Internet searches yields clues to lung cancer diagnosis". The author is "By NEIL VERSE". The article includes a sub-header "HEALTH, DIAGNOSTICS" and a date "Nov 11, 2016 at 7:20 AM". It shows a share count of "25 SHARES" and social media icons for Twitter, Facebook, Google+, and LinkedIn. There is an anatomical illustration of human lungs with red and blue branching structures. The article text discusses how Microsoft health researchers used search logs to identify risk factors for lung cancer in non-smokers.

Innovating Health for Tomorrow Case Study: Karolinska Heart Failure Day Care Clinic

CAN YOU TRANSFORM HEALTHCARE WHEN YOU HAVE LITTLE BUDGET AND OPPOSITION FROM KEY STAKEHOLDERS?

How Stefan Vlachos and Nina Lahti, past participants of Innovating Health for Tomorrow, took their learnings and applied them to drive innovation in the workplace.

In 2014, Stefan Vlachos attended the Innovating Health for Tomorrow (IHT) at INSEAD with the ambition to innovate healthcare, but facing a tough new job. Vlachos had recently been appointed head of The Center for Innovation at Karolinska University Hospital, the prestigious Stockholm-based hospital, but as an engineer he had little political weight to change ways of working in the prestige-heavy university hospital run largely by high profile physicians. How could he transform the organisation for the better from his unique, low-power position?

While in the IHT programme, Vlachos learned about innovation techniques that can be applied to quickly test and validate new ideas in many industries, including health. Vlachos went home, bought the book discussed in class (The Innovator's Method) for his entire team, and then together they started to apply the ideas – also to innovation projects already under way.

One of the early puzzles he and his team tried to tackle in an ongoing project was the limited outcomes in heart failure care. Despite significant advances in care and new treatments over the past decade, patient outcomes had not improved regarding advanced heart failure treatment. When the hospital started to investigate, the team recognized that the broader organization was falling into the "solution-first" trap that had been covered at IHT—applying solutions without first understanding what problem you are solving. In this case, medical device manufacturers argued that Karolinska was installing far fewer left ventricular assist devices than comparable hospitals and thus proposed the solution would be to use more devices with patients. But how to identify patients in need of those devices? The physicians inside Karolinska argued that the problem was an information and communication problem, and that they needed to be better at educating staff about heart failure care. In response, Karolinska launched an information campaign, but

“When everything else fails, I just talk
to the patient”
